

# HYDRO-SPRAY MULCH

...for reliable, cost  
effective hydroseeding

## DESIGNED FOR HIGH PERFORMANCE

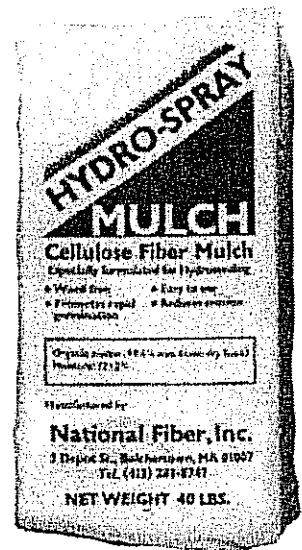

National Fiber's mulch for hydroseeding is specially formulated recycled cellulose fiber and has no inhibitors to growth or germination. It is non-toxic and free from weeds, insect infestation and fungal growth. It is produced to exacting standards to assure consistent uniform texture and quality. It blends with grass seed, fertilizer and other additives to form a homogeneous slurry that prevents clogging in hydraulic mulching equipment and disperses evenly. The harmless green dye acts as a visual guide to aid in even coverage and produces an immediate finished appearance.

## THE PROFESSIONAL APPROACH TO SUCCESSFUL HYDROSEEDING

### *Recommended Application*

National Fiber recommends using 1200 lbs. of Hydro-Spray mulch per acre for optimum coverage and effectiveness. Please refer to instructions provided by the manufacturer of your hydroseeding machine for proper mix proportions.

Hydro-Spray mulch provides the ideal growing environment for uniform high quality turf. It protects against wind and water erosion and stabilizes temperature variances making a stable bed for fast seed germination and strong plant starts. It produces a semi-porous crust that permits gradual healthy absorption and retention of moisture. Where some other more costly mulches fail, National Fiber's mulch sticks to contours and facilitates remote seeding in hard to reach areas.

### SPECIFICATIONS

Hydro-Spray mulch is manufactured from recycled cellulose fiber and is completely free of factors which inhibit germination of growth. The mulch and its dye are both biodegradable and are not toxic to plant or animal life in normal use.

Organic Matter (Oven dry basis)	98.6% min
Ash Content	1.4% max
Moisture Content	12 ± 2%
pH Range	5.5 ± 1
Water Absorption Capacity	10 x weight

**Disclaimer:** National Fiber certifies that Hydro-Spray Mulch when tested in our laboratory meets the specifications above. Because of the variation between laboratories and test methods, precise agreement with our test results cannot be guaranteed.
